

PRESS RELEASE OCTOBER 2019

FREBS MARINE INTERNATIONAL LTD

The Universal Cargo System is described as 'disruptive technology' and requires a novel and brave approach to cargo shipping, which has been relatively conservative for many decades. All the major sectors of the supply chain have to adapt to and invest in many new concepts. The rapid advances in the automation of processes and the installing new IT systems will work in parallel with the FREBS system.

Working closely together the shipping industry will be able to manage the inevitable growth in worldwide sea trade over the next thirty or more years.

One of the many special applications of the Universal Cargo System is the

FREBS HUMANITARIAN AID BARGE

The FHAB is fitted with a wide range of emergency equipment.

eg. tents, food, cross country vehicles, clothes, kitchen equipment
and a fully equipped hospital.

It is autonomous and self-powered.

This can be loaded into FREBS ships and transported to a disaster area and floated off to moor at sea or at a dock or in an estuary.

It has its own helicopter with a landing pad.

The FHAB could be deployed to areas hit by a hurricane or by a tsunami.

There are many commercial, military and naval applications worldwide.
